

Basic - is the most affordable training system in SCATT model lineup. This model is designed for beginners and intermediate level competitive shooters. With SCATT Basic you can practice at any distance up to 50 m, either indoors or at open shooting ranges, in dry fire mode or in live fire mode, using real ammunition.

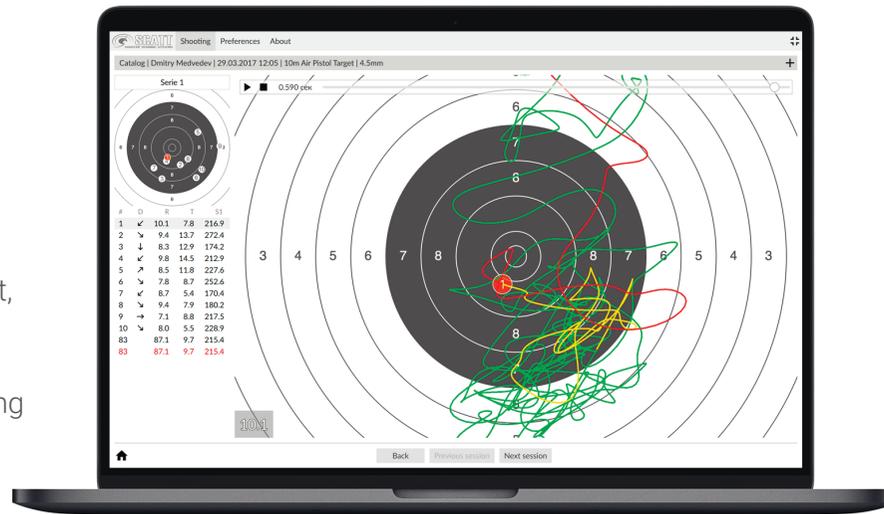

Basic

A special feature of this model is the lack of an electronic target. Which means that now you will be able to train by simply using a paper target or a standard target installation* (i.e. SIUS). In live fire training you don't have to worry anymore about damaging the expensive device.

Optical sensor – mounts on the shooter's gun and connects directly to the USB port of your computer. It precisely registers the gun's alignment during aiming and at the time of the shot (release of trigger). Software allows automatic calibration of the sensor relative to the aiming axis, so there is no need for adjusting sights of the weapon.

Software - the system comes with convenient, crossplatform software - **SCATT Basic**. It offers the most used and valuable training features for developing and improving shooting skills.

SPECIFICATIONS

Use	indoor / outdoor
Distance to the target	from 2.5 to 50 m
Optical sensor connection type	wired (USB)
Optical sensor dimensions:	26 x 31 x 34 mm
