

Knobloch SHOOTING GLASSES

THE SHOOTING GLASSES are special glasses which require a special lens refraction. The requirement you need to find the right lens is the knowledge about the target and individual target points. An optician or ophthalmologist must be trained to be able to recognize the special needs of the shooters so that they can find the right lens. For many years Optik Knobloch has offered seminars for the appropriate adjustment of shooting glasses for opticians and ophthalmologist.
